Dear Brenda,

Thank you for this opportunity to make a statement about the Dyslexia Correction Program for your new website.

As a teacher and administrator for over 25 years, I would be happy to recommend the Davis Program. I have been greatly impressed, having seen the results it has given for a young 10 year old boy I tutor on a weekly basis. Having done some initial training with you I was astonished to see how the program can fit with sound educational pedagogy. After our first session I was left wondering why this program is not implanted in all schools and learning situations. To me the program has made significant improvement in a child's ability to read words and access the world of text. The Davis Program has given the child responsibility for his learning. I find the procedures and steps easy to manage as I facilitate his learning. The training I did with you was very logical and beneficial when working with dyslexic children and children who struggle with reading and viewing written texts. I would thoroughly recommend this program as a positive and workable method of helping dyslexic children to read and as a way of allowing students to find success in their own abilities. I have seen success in only one month and prolonged interest in reading for enjoyment after two months on the Davis program. This program has done for this young boy in two months what five years in school could not achieve. I believe it has equipped the child with the necessary skills to decode and make meaning of text, which is a necessary life skill in his future education and as a valued member of our society.
